HEALTHCARE QUIZ
CREATIVE: ROUND 2

OPTION 1

HOW SECURE IS YOUR HEALTHCARE IT NETWORK?

5-MINUTE SECURITY QUIZ

The healthcare industry is the most targeted sector by cybercriminals.[1] Does your network have the security it takes to protect patient data from cyber threats?

More than one healthcare data breach is reported every day.[2]

Valuable electronic health records, potentially worth thousands of dollars each on the black market, are a prime target for thieves. Healthcare IT must enhance network security or pay the price.

RISK LEVEL:

LOW [====== progress bar ======] HIGH

HOW VISIBLE IS YOUR NETWORK?—1/3

Do you support remote work on your network?

- ○ **Yes, for staff and patient caregivers**
- ○ **Yes, for non-patient-facing staff**
- ○ **No**

NEXT

FINAL RISK LEVEL: LOW

You scored a 90! Your healthcare network offers IT visibility and control, but cyberattacks can still reach your patient data. To ensure complete, end-to-end protection, Aruba solutions can level up your digital security.

MODERNIZING CYBERSECURITY IN HEALTHCARE

Learn how to increase your cybersecurity before it's too late. Healthcare breaches are too common and the data is worth too much on the black market to take risks. With Aruba, you can implement zero trust security measures across your network and ensure you have the critical visibility you need.
